### Simon 3 - Protecting the things you value most

GE Security

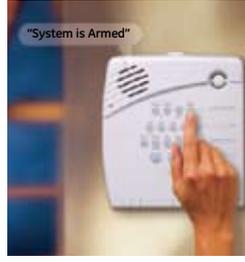

# Affordable, reliable security with Simon 3

The Simon 3 wireless security system offers proven performance in a quality-tested design—with the added advantage of being extremely easy to install and operate. This value-driven security system, equipped with many of the sophisticated features

found on the SimonXT™, is a budget-driven option that includes an innovative sensor along with a full range of user-friendly options. For affordable and reliable home security, the Simon 3 system delivers advanced security at an incredible value.

**Peace-of-mind installation.**  
Because it's wireless, Simon 3 can be installed in hours, not days, anywhere within your residence.

**Easy-to-understand system operation.**  
Built-in digital voice commands direct you through every step of operating the system. It is so simple that even a small child can follow the instructions and use the system.

**You are never alone.**  
Simon 3 is designed to respond instantly to any type of emergency (fire, intrusion or personal)—automatically or with a touch of a button.

**Custom-designed for you.**

Simon 3 offers a full range of built-in security features, such as a door chime that lets you know when a child has opened an outside door or when a customer has entered your business.

**System control to carry with you.**  
Simon 3 offers pushbutton control you can carry on a keychain or keep bedside.

**Even more control.**  
Only Simon 3 offers a supplementary talking touchpad to serve a back door or master bedroom.

# A full range of selectable options

**Your direct voice connection to emergency response.**  
Simon 3 provides a nearly instant voice connection to central station personnel in the event of an emergency—without the need to press buttons, talk or listen to the operator.

**Be informed, wherever you go.**  
Simon 3 can call any telephone and deliver a clear, concise voice message notifying you of system events such as alarms, latchkey disarming and more.

**Less is more.**  
GE DesignLine wireless sensors represent the latest technology for reliable and convenient home security. Their low-profile design and modern look offer the smallest, most unobtrusive wireless security sensors in the industry.

**X10 control.**  
Simon 3 gives you the option to control lights and appliances with X10 line carrier technology—by schedule, by event or with the press of a button.

**Less worry for parents.**  
Parents need to know when their children are home safely from school. If a child does not disarm the system within a scheduled time, Simon 3 will call your telephone or pager to let you know.
